- Wordpress
- PHP
- Laravel
- React (Next)
- Leadership
- VueJS (Nuxt)

- Data Visualisation
- DNS
- Typescript
- Communication
- Git
- UX/UI Design w/ Figma

- TailwindCSS & Bootstrap
- API's
- Digital Ocean
- Database
- Collaboration
- Inertia
- Impeccable problem solving

EXPERIENCE

Lead Full Stack Web Developer, Belva Digital Agency

April 2020 - Present

In my current role at Belva Digital, I started as a Junior Developer and progressed to the position of Team Lead after two and a half years. My responsibilities encompass: leading a team of 6 talented engineers in designing user interactions, developing front-end website architecture, creating back-end applications, and setting up developer pipelines for optimal functionality.

Junior Front-End Engineer, Legibra

April 2019 - Mar 2020

I was responsible for developing new user-facing features, determining the structure and design of web pages, building reusable codes, optimizing page loading times, and using a variety of markup languages to create the web pages. With an understanding of the web development process from inception to deployment. I also have a good understanding of industry trends and the newest software programs and languages. In addition to the technical skills, they need to have excellent problem-solving skills and flexibility due to the changing technologies.

Internship, Front-End Engineer - Legibra

April 2019 - Mar 2020

As an intern web developer, I shaped user-facing features, designed pages, and optimized performance through reusable code. Engaging in the full web development lifecycle, I adapted to evolving technologies, demonstrated problem-solving skills, and stayed current with industry trends. These experiences were instrumental in enhancing my career, providing a strong foundation for future growth.
